YUSUF TALHA ALISAN

+90 553 740 4838 | y.alisan53@gmail.com | linkedin.com/in/yusuf-talha-alisan | github.com/YusufAlisan53

EDUCATION

Fırat University — Elazığ, Turkey
B.Sc. in Computer Engineering — *2021 – Present*

Anadolu University — Eskisehir, Turkey
B.Sc. in Management Information Systems — *2026 – Present*

Anadolu University — Eskisehir, Turkey
Associate Degree in Web Design & Coding — *Graduated 2026*

EXPERIENCE

Computer Engineering Intern — Aug 2025 – Sep 2025
EHSİM (Defense Industry) — *Ankara, Turkey*

- Developed MeetSync, a corporate Meeting and Room Reservation Platform using .NET Core (C#), React, and TypeScript.
- Architected the backend adopting Clean Architecture with CQRS and Mediator layers for strict separation of concerns.
- Engineered time-conflict prevention algorithms to manage real-time room availability and eliminate overlapping reservations.
- Implemented role-based authorization with JWT and refresh token management integrated via Axios Interceptors.

Computer Engineering Intern — Sep 2024
ÇAYKUR (General Directorate of Tea Enterprises) — *Rize, Turkey*

- Developed HemenOto, an end-to-end commercial truck rental management application using ASP.NET Core API.
- Built upon Onion Architecture, enforcing strict dependency inversion across Presentation, Application, Domain, and Infrastructure layers.
- Applied CQRS and Mediator pattern to decouple read/write operations and streamline cross-layer communication.
- Designed the relational database schema in MSSQL and integrated real-time data synchronization via SignalR.

PROJECTS

Turkish Named Entity Recognition | *Python, HuggingFace Transformers, Flask*

- Deployed bert-base-turkish-ner-cased (HuggingFace Transformers) via a Flask REST API, enabling real-time NER across 19 fine-grained entity categories.
- Engineered a custom TDK-compliant post-processing layer using rule-based logic and context analysis to correct and filter model predictions.

Central Hospital Appointment System | *PostgreSQL, Node.js, Express, React, TypeScript, Prisma ORM*

- Architected a PostgreSQL schema with triggers, views, and index constraints to automate doctor scheduling and prevent appointment overlaps.
- Built a full-stack clinical management platform featuring role-based access control, medical record tracking, and real-time availability filters.
- Engineered optimized database views and SQL aggregation pipelines for department analytics, daily visit logs, and digital prescription history.

Cross-Eyed Test | *Python, OpenCV, MediaPipe, NumPy*

- Built a real-time strabismus detector using MediaPipe FaceLandmarker, computing normalized 3D iris-to-corner ratios across 478 facial landmarks.
- Implemented a hysteresis frame-buffer to debounce rapid eye movements and prevent false positives in the detection pipeline.

LAN Games | *Node.js, Express, Socket.io, HTML5 Canvas*

- Built a browser-based 2D multiplayer tank game with 3 game modes (FFA, Team DM, CTF), 4 maps, and a weapon/killstreak system.
- Implemented client-side prediction and interpolation with binary Socket.io transfers and a custom AABB collision and ricochet physics engine.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, TypeScript, SQL
Frameworks: .NET Core, ASP.NET Core API, React.js, Node.js, Express, Flask
Developer Tools: Git, GitHub, Visual Studio, VS Code, Postman
Libraries: Entity Framework Core, SignalR, PyTorch, Transformers, OpenCV, MediaPipe
Architecture: Clean Architecture, Onion Architecture, CQRS, Mediator Pattern, JWT/RBAC
