EDUCATION

Istanbul Technical University — Istanbul, Turkey
B.Sc. in Computer Engineering (GPA: 3.48 / 4.00) — *2021 – 2025*

Warsaw University of Technology — Warsaw, Poland
Erasmus+ Exchange Program in Computer Science — *Sep 2023 – Feb 2024*

EXPERIENCE

Backend Software Engineer Intern — Jul 2025 – Sep 2025
Trendyol Group — *Istanbul, Turkey*
- Engineered high-throughput order fulfillment microservices using Go, Spring Boot (Java), and Apache Kafka handling 50K+ RPM.
- Implemented distributed caching strategies with Redis Cluster, reducing average API response latency by 38% across checkout endpoints.
- Designed automated integration and load test suites using Testcontainers and k6 within GitLab CI/CD pipelines.

Full-Stack Developer Intern — Jun 2024 – Sep 2024
ASELSAN — *Ankara, Turkey*
- Developed a real-time telemetry monitoring dashboard using React, TypeScript, and .NET 8 Web API with WebSocket streaming.
- Architected role-based access control (RBAC) and audit logging modules adhering to defense-grade security standards.
- Optimized complex PostgreSQL spatial queries with PostGIS indexing, accelerating map layer rendering by 3x.

PROJECTS

CloudScale Distributed Task Scheduler | *Go, gRPC, Redis, Docker, Kubernetes, Prometheus*
- Built a fault-tolerant distributed cron and job queue engine using Raft consensus and gRPC leader-worker heartbeats.
- Exposed real-time Prometheus metrics and Grafana dashboards for worker utilization, queue depth, and retry backoff tracking.

RAG-Based Legal Document Assistant | *Python, FastAPI, LangChain, Qdrant, React, TypeScript*
- Developed a Retrieval-Augmented Generation (RAG) pipeline over Turkish legal statutes with hybrid dense/sparse vector search.
- Implemented semantic chunking and citation verification to eliminate hallucinations and link answers to exact article clauses.

Autonomous Drone Lane & Obstacle Tracker | *C++, Python, YOLOv8, OpenCV, ROS2*
- Trained a quantized YOLOv8-nano model deployed on NVIDIA Jetson Nano achieving 42 FPS real-time obstacle avoidance.
- Integrated Kalman filtering and optical flow estimation for stable trajectory planning under GPS-denied environments.

TECHNICAL SKILLS

Languages: Go, Java, C#, Python, TypeScript, JavaScript, C++, SQL
Frameworks: Spring Boot, .NET Core, FastAPI, React.js, Node.js, Express
Developer Tools: Docker, Kubernetes, Git, GitLab CI/CD, Linux, Postman, Grafana
Databases & Messaging: PostgreSQL, Redis, MongoDB, Apache Kafka, RabbitMQ, Qdrant
Architecture: Microservices, Event-Driven Architecture, Clean Architecture, gRPC, REST, JWT/OAuth2
